

ELECTROPLATING • COATING • SPUTTERING

**Subject: RoHS and REACH – Statement of Compliance**

**RoHS**

All coating processes applied by Tanury Industries do not intentionally include Cadmium (Cd), Mercury (Hg), Lead (Pb), and Hexavalent Chromium (Hex 6) residue, and flame retardants such as Polybrominated Biphenyls (PBB) or Polybrominated Diphenyls Ethers (PBDE) in the process. Tanury Industries has converted from Hexavalent Chromium to Trivalent Chromium over a decade ago.

The new substance requirements set out by RoHS 2015/863/EU that are not present in our process include:

Bis (2-Ethylhexyl) phthalate (DEHP)

Benzyl butyl phthalate (BBP)

Dibutyl phthalate (DBP)

Diisobutyl phthalate (DIBP)

Furthermore, our raw material suppliers have indicated that to the best of their knowledge the raw materials that they supply for the manufacture of the products are compliant with the current European RoHS Directive (2002/95/EC).

Please be advised that trace levels of heavy metals may be present as impurities however it does not exceed the allowable amounts as specified by the current annex of the RoHS directive.

Note: Tanury Industries does not routinely test these processes for the restricted substances, but rather rely on our raw material suppliers and technical publications for information. Hence, based on this information we would expect the above-mentioned parts to comply with the European RoHS Directive (2002/95/EC).

**REACH**

Additionally, based on such information this document also certifies that Tanury Industries complies with reach directives with the exception of nickel which may be used in the plating process. Any product should be labeled accordingly.

A handwritten signature in black ink, appearing to read 'Michael A. Akkaoui', is written over a horizontal line.
